<http://asecuritysite.com/unit06>

Identity on the Internet

Identifies it is trusted
(Digital Certificate)

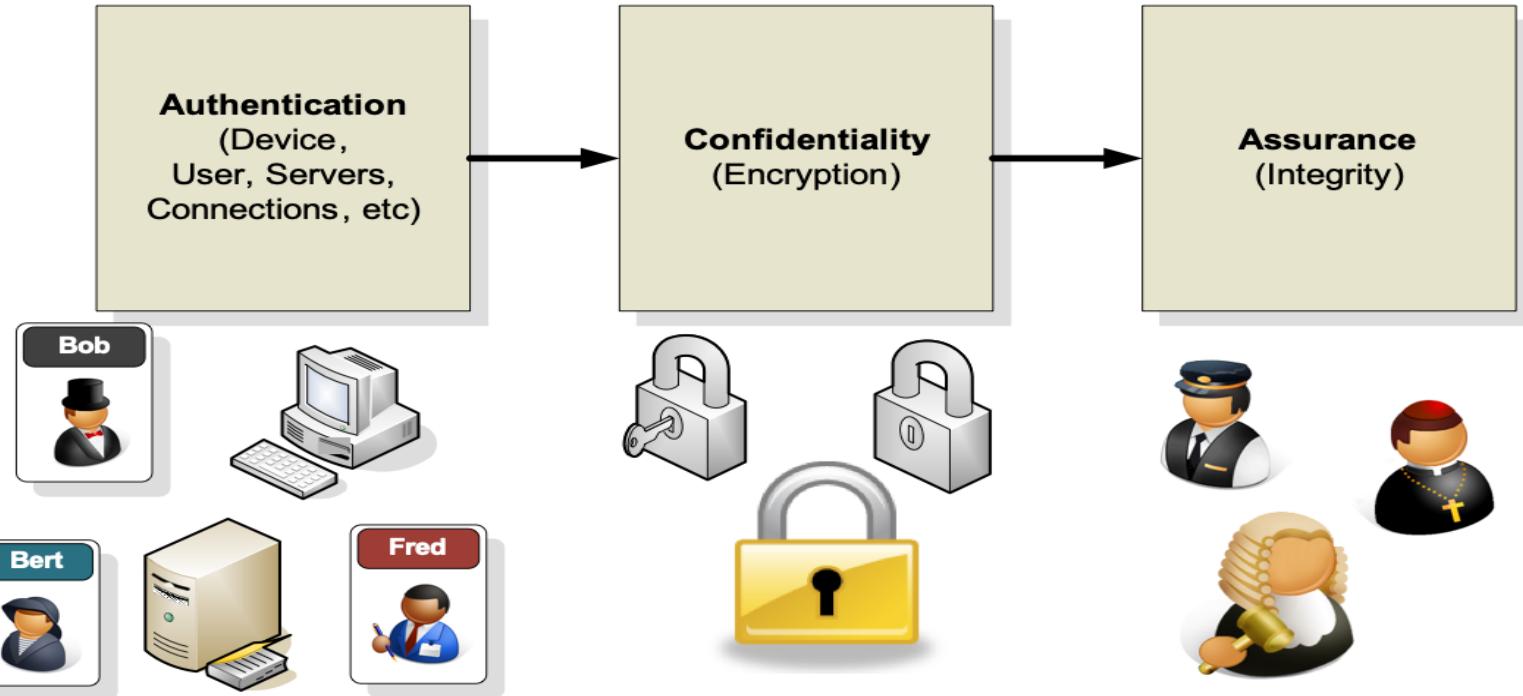

Keeps communications
secure (encryption)

A screenshot of a Firefox browser window displaying a secure connection to [paypal.com](https://www.paypal.com/uk/webapps/mpp/home-merchant). The address bar shows a lock icon and the URL `https://www.paypal.com/uk/webapps/mpp/home-merchant`. A callout box from a character named Bob points to the digital certificate information in the status bar, which reads: "You are connected to **paypal.com** which is run by **PayPal, Inc.** San Jose California, US Verified by: VeriSign, Inc." Another callout box from a character named Trent points to the padlock icon in the status bar, indicating a secure connection. The main content area of the browser shows a promotional message: "However you do business, PayPal gets you paid. Choose your payment solution, you can switch any time." Below this, there is a button for "Accept card payments anywhere with PayPal Here™" and a link to "Learn More".

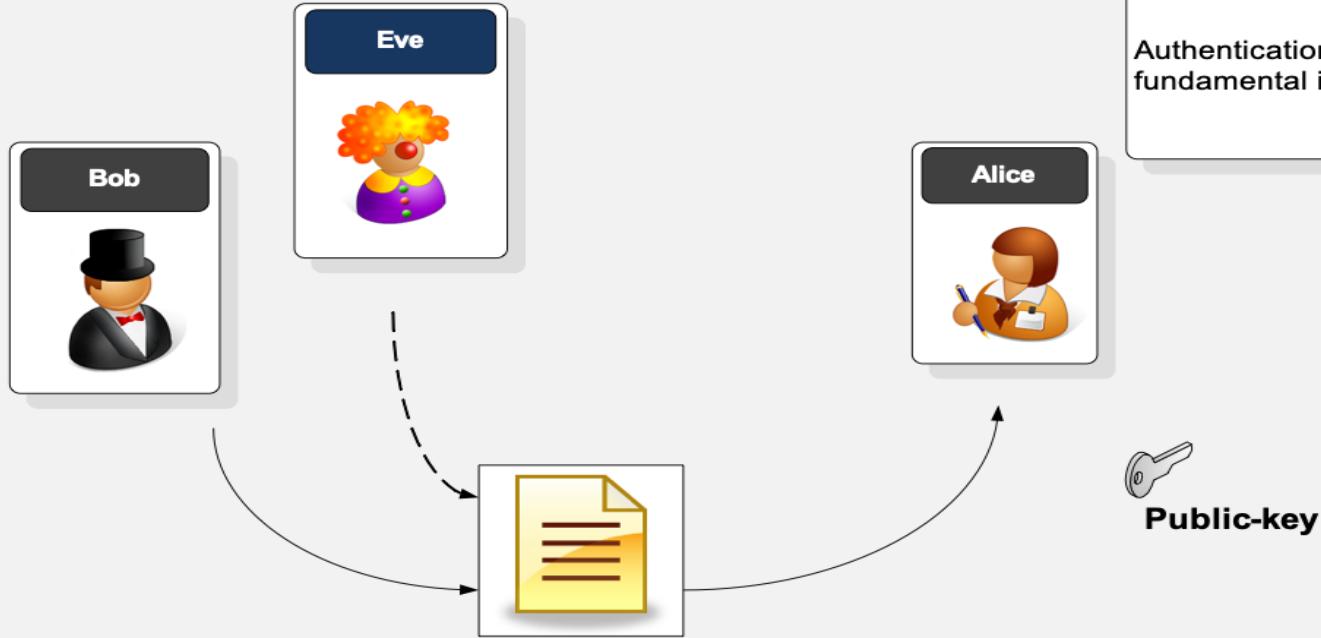

Bob

Eve

Learn More

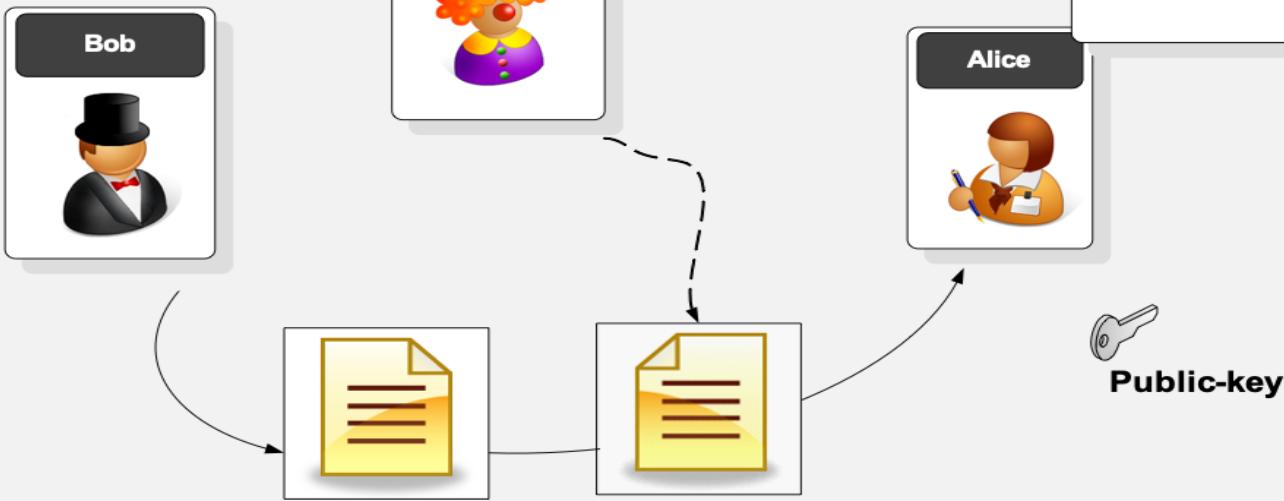

Authentication is a fundamental issue in security.

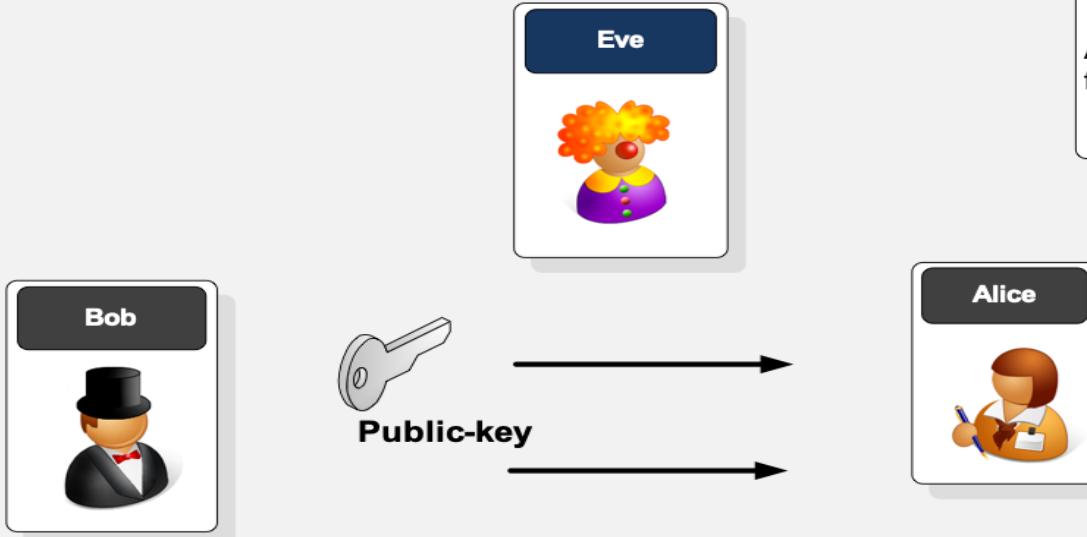

How do we know that it was really Bob who sent the data , as anyone can get Alice's public key , and thus pretend to be Bob?

Authentication is a fundamental issue in security.

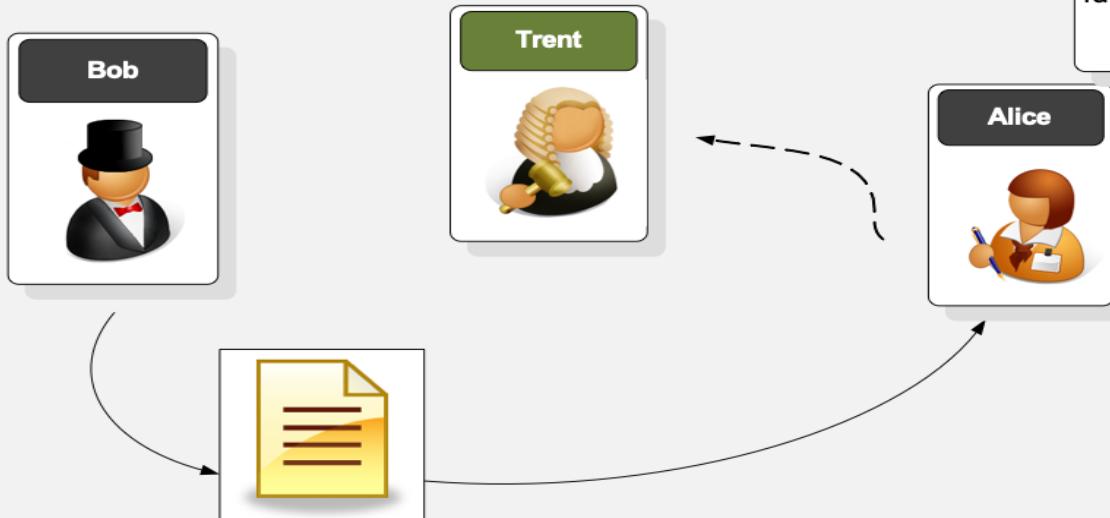

How can we tell that the message has not been tampered with ?

Authentication is a fundamental issue in security

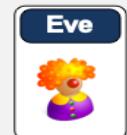

How does Bob distribute his public key to Alice, without having to post it onto a Web site or for Bob to be on-line when Alice reads the message?

Authentication is a fundamental issue in security.

Who can we *really* trust to properly authenticate Bob? Obviously we can't trust Bob to authenticate that he really is Bob.

Unit 6: Digital Certificates

Digital Certificate Passing

Prof Bill Buchanan OBE

<http://asecuritysite.com/crypto06>

<http://asecuritysite.com/encryption>

Who do we trust to get Bob's certificate ... we can't trust Bob, as he may be Eve... meet Trent.

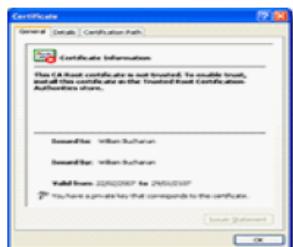

Digital Certificates

Digital certificates are a soft token of authentication, and require a trust mechanism

Trusted Root CA

The Trusted Root CE (Trent) checks Bob's identity and creates a certificate which he signs

Certificate Authority (CA)
- Able to grant certificates
Examples; Verisign, Entrust, Microsoft Trust.

Trent

Trusted root certificates are installed as a default on the machine (or installed with the user's permission)

Trusted root certificate

Alice checks the signature of the certificate to validate Bob. Both Alice and Bob trust the CA (Trent) as a third party.

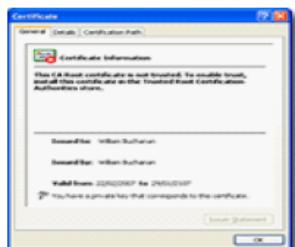

Author: Prof Bill Buchanan

Trusted Root CA

Eve tricks the CA to get a certificate with Bob's name

Alice checks the signature of the certificate to validate Bob. Both Alice and Bob trust the CA (Trent) as a third party.

Certificate Authority (CA)
- Able to grant certificates
Examples; Verisign, Entrust, Microsoft Trust.

Trent

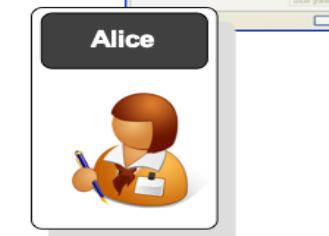

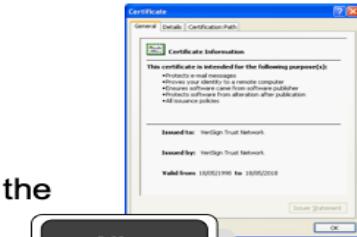

Trusted root certificates are installed as a default on the machine (or installed with the user's permission)

Trusted root certificate

Author: Prof Bill Buchanan

Certificate intended purposes

Signing, Windows Hardware Driver Verification

Intermediate CA
- Can be trusted for some things

Levels of trust

The two main problems with digital certificates are:

- Lack of understanding of how they work.
- They can be spoofed.

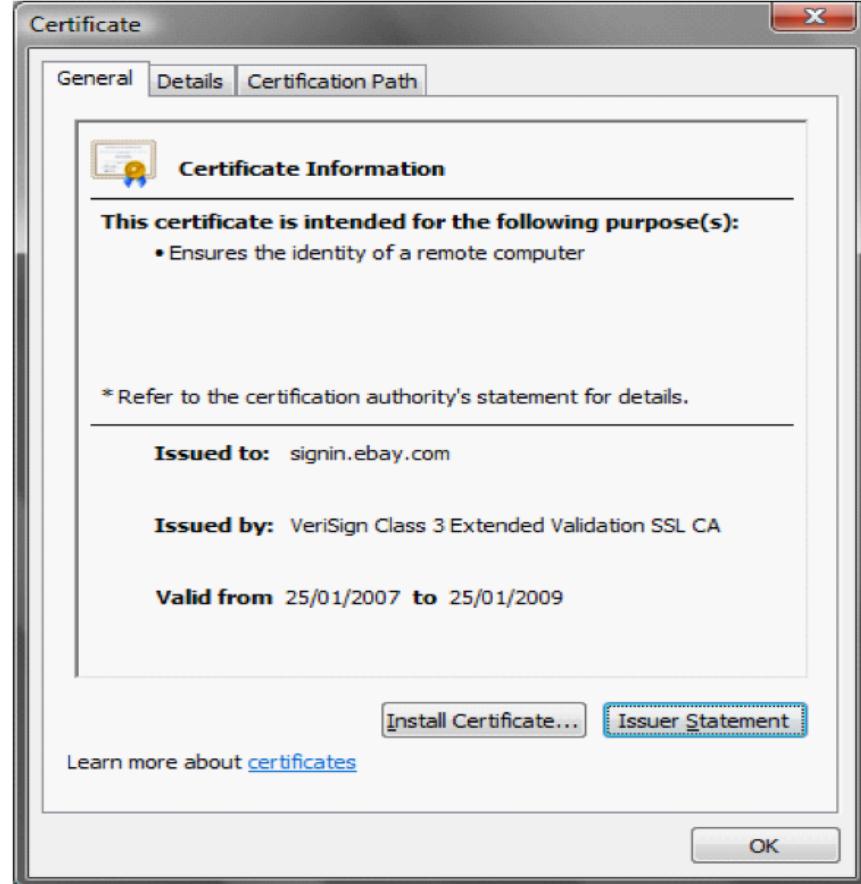

So let's look at a few ... are they real or fake?

VeriSign Relying Party Agreement

YOU MUST READ THIS RELYING PARTY AGREEMENT ("AGREEMENT") BEFORE VALIDATING A CERTIFICATE, USING VERISIGN'S ONLINE CERTIFICATE STATUS PROTOCOL ("OCSP") OR USING A VERISIGN OR VERISIGN AFFILIATE DATABASE OF CERTIFICATE REVOCATION LIST ("CRL"). IF YOU DO NOT AGREE TO THE TERMS OF THIS AGREEMENT, DO NOT SUBMIT A QUERY AND DO NOT ACCESS, OR RELY ON ANY VERISIGN INFORMATION. IN CONSIDERATION OF YOUR AGREEMENT TO THESE TERMS, YOU ARE ENTITLED TO USE VERISIGN INFORMATION AS SET FORTH HEREIN.

1. Term of Agreement. This Agreement becomes effective when you submit a query to validate a Certificate, or rely on any VeriSign Information in the manner set forth in the preamble and shall be applicable for as long as you use and/or rely on such VeriSign Information.

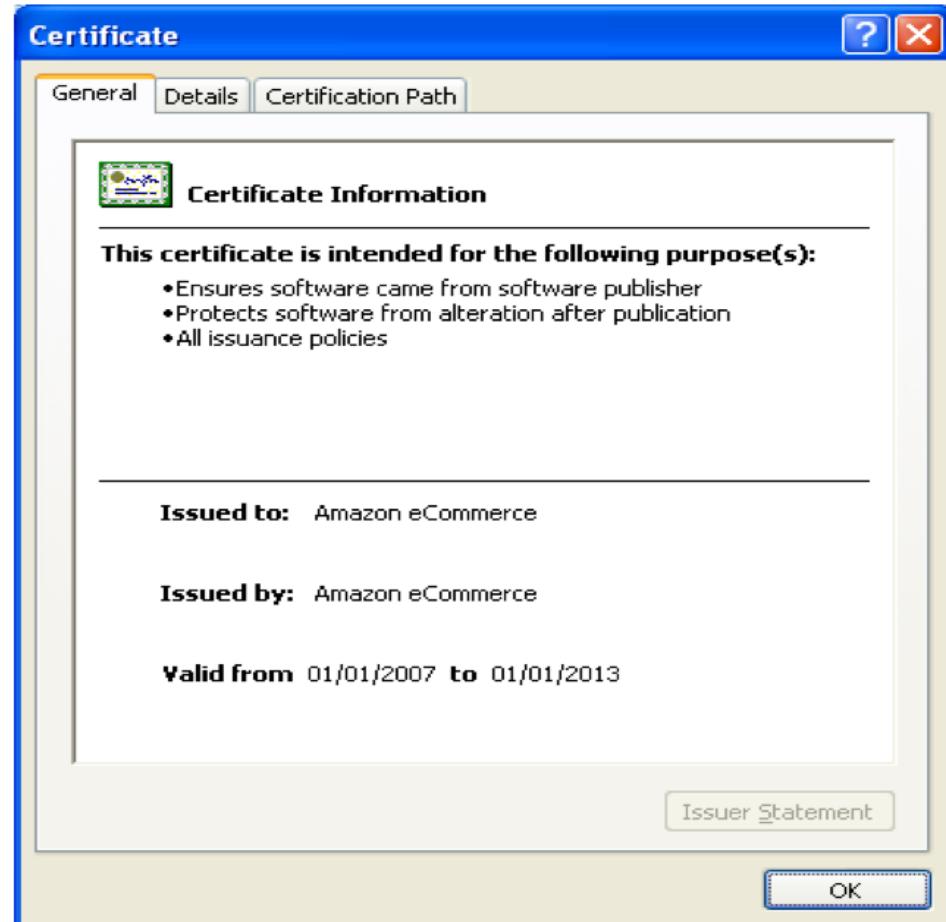

2. Definitions.
"Certificate" or "Digital Certificate" means a message that, at least, states a name or identifier for the Subscriber, contains the Subscriber's public key, identifies the Certificate's serial number, and contains a digital signature of the issuing CA.
